Thanks James.

Randy will be responding to you soon about having a call with you later this afternoon. Also, I thought I'd suggest adding the state/tribal co-managers' *Puget Sound Commercial Salmon Fisheries Sampling Manual* to the list of documents supporting a 20% sampling rate. Talk to you later.

Hi Scott,

I was reaching out to Randy to give you two a head-up that I would be responding to a request for clarification on sampling rates that Cindy had posed to us. It was an overall sampling question but it also had implications for the proposed troll fishery. She indicated the topic was discussed at a recent co-manager meeting.

In my response I do speak to the 20% rate, it's basis and use, and that it is the proposed objective in the Chinook RMP and in the SCSCI.

I plan to respond soon, so if you have any concerns, please let me know. O, give ma a call at 360-522-3673.

Thanks,
