James,

Please see the attached revised harvest memo enclosure language. We attempted to address most of your proposed changes. The main issue at this point seems to be when the updated information would be needed by NOAA. From our perspective, we would not know that until the package has been pretty well worked out. We are suggesting the end of the April PFMC. If there are any remaining red flags/fatal flaws, please let the co-managers know.

Thanks,  
Rob
